## Task I: Personal Website using HTML/CSS

1. What are the *two main sections* of an HTML file?

Ans:- The 2 main sections of my HTML file would be the header and the body part of the file. The header has all the metadata and links for the file and the body has all the content for the page.

2. Did you separate your HTML and CSS into separate files or put the CSS within the HTML file?

- If you separated them, which HTML tags did you use to link the two?
- If you didn't separate them, what HTML tags did you use to specify the CSS content?
- In which section of the HTML file, did you put them?

Ans:- I used a separate file for the css not the same file embedded CSS.

I used the LINK Tag <link> to link them.

I put the link in the head section of the file.

3. Did you use any W3schools template? If so, which template did you use? How did you link it with your HTML file?

Ans:- Yes I have used template 3 from the W3School.

I used the link tag as shown in the w3school website to link template and the tag to button for the feature.

4. Did you use any web fonts? If so, which ones and how did you link them into your HTML file?

Ans:- No, I have not used the web font but in the css file I have specified the fonts and the types.

5. Is your website organised as a *single HTML file with sections* or *multiple HTML files linked through anchor tags*.

Ans :- I have separate HTML file for each pages I did not make a single file with sections.

6. How much time did you spend choosing the fonts and colour combinations 😊?

Ans:- I did not really spend time on fonts or colour there is a website for the same thing that suggest color pallets and font pallets.

7. Does your webpage have a sidebar or a drop-down menu? If so, what HTML tags did you use?

Ans:- Yes, My site has a sidebar. I have used the <nav> tag and the w3school template to link the sidebar.

8. If you answered **YES** to the previous question, then answer this. Did you see any JavaScript code for such features? Were you able to understand it?

Ans:- I have answered Yes , No i did not see any JS code for this as I have used the w3school template for the sidebar.

9. Is your webpage **responsive**? What do you mean by it?

Ans:- No not really I did not make it responsive, the little bit of responsiveness I have is due to the W3school Template and tags. I understand it as the the resizing and the animation.
